WOUND CARE MARKETPLACE

ufacturer (private label and brand name), key-leading distributor, and multinational biotechnology company in the collagen advanced wound care industry.

Medifil® II Collagen Particles, Skin Temp® II Collagen Sheets, and Collatek® Collagen Gel are unique in containing 100% native bovine collagen, and the ability to retain its triple helical shape and high protein structure. Their non-hydrolyzed collagen contains a higher nativity, thereby allowing for better stability of the collagen molecule and scaffolding moving wounds towards healing trajectory. Collagen plays a vital role in all phases of wound healing providing not only structural support, but cellular functions including targeted interactions like autolysis, moisture balance,

bacteria management, angiogenesis, and reepithelialization.

Indications for *Kollagen™* Technology products include management of acute and chronic wounds, partial and full-thickness wounds, non-infected and infected wounds, and minimal to heavily exuding wounds. Do not use it on patients with bovine sensitivities or third-degree burns. Product compatibili-

ty with other topical agents and or dressings.

Medifil® II collagen particles are available in 1-gram vials and pouches. *Skin Temp® II* collagen sheet dressings are available in sizes 2"x2", 3"x4", and 8"x12". *Collatek® Collagen Gel* is available in Tube: 1 oz. (30g). For more information, visit <https://www.humanbiosciences.com>, Toll-free (888) 565-5243 or E-mail info@humanbiosciences.com.

VeinOPlus Accelerates Ulcer Healing, Reduces Edema, Increases Walking Distance Without Pain

Are you open to prescribing a proven device for increasing circulation for diabetic foot ulcers, edema, venous stasis ulcers, and claudication limb pain?
